Update on 1:1 Implementation:

Students in grades 6 through 12 are currently being assigned their personal devices. The 1:1 Technology Initiative is a step towards personalized education and high student achievement.

Dickinson Public Schools strives to create a safe environment for learning in and out of the classroom. School devices are all set with a cloud filtering system compliant with the Children’s Internet Protection Act (CIPA). The devices are protected by a district filtering system both on and off the school network, as well as a state filtering system while in school.

Our device management system allows each device and student to be filtered, protected, managed, and monitored. We encourage parents to take this opportunity to work with our teachers and talk to children about the importance of internet safety.
